

Business Problem

Explain:

A telecom company wants to identify customers who are likely to leave (churn). By analyzing customer demographics, services, contracts, payment methods, and billing information, the company can understand the factors affecting churn and improve customer retention.

Objectives

Write:

- Clean raw telecom customer data.
- Store data in PostgreSQL.
- Perform SQL analysis.
- Build an interactive Power BI dashboard.
- Generate business insights.
- Support data-driven decision-making.
